Trading Strategy — Aggressive Momentum Expansion + ORB (CRYPTO)

⚠️ WARNING — HIGH-RISK / HIGH-REWARD. Intentionally aggressive. Large drawdowns expected.

Objective: $1,000 → $100,000

Environment: Crypto ONLY
Style: Momentum expansion with controlled aggression + session-based ORB entries

---

Tradable Assets: BTC, ETH, SOL, XRP only

- One position per asset max
- No additional assets ever

Global Risk

- Max leverage: 5x (3x preferred)
- Risk per trade: 3–5% (default 4%)
- Max concurrent positions: 3
- Max session loss: 15% → halt
- Max total drawdown: 30% → halt

Regime Filter (BTC defines regime)

- **Bullish:** price > 24h MA OR 3/4 hourly candles green → LONGS only
- **Bearish:** price < 24h MA AND 3/4 hourly candles red → SHORTS only

- **Chop:** no trades

STRATEGY 1 — Momentum Expansion

LONG Entry (3 of 6 required — no longer all 6)

1. Price > 24h MA
2. Higher highs/lows (1h/4h)
3. 3+ of last 4 hourly candles green
4. Break of 4h high OR shallow pullback (<2%)
5. 1h volume ≥ 1.3× 24h avg
6. 1h ATR ≥ 1.2× 24h ATR avg

SHORT Entry (3 of 6 required — no longer all 6)

1. Price < 24h MA
2. Lower highs/lows
3. 3+ of last 4 hourly candles red
4. Breakdown of 4h low
5. Volume ≥ 1.3× avg
6. No major support within 2% below

> **Note:** Minimum 3 of 6 conditions must be met. More conditions = higher confidence. Log confidence score (e.g. 3/6, 4/6) with every trade.

STRATEGY 2 — 15-Minute Opening Range Breakout (ORB)

Sessions Monitored

Session	Time (UTC)	Time (EST)
New York Open	14:30 UTC	9:30 AM EST
Asia Open	00:00 UTC	7:00 PM EST

Setup Rules

1. **Mark the range** — At session open, record the HIGH and LOW of the FIRST 15-minute candle (including wicks). This is the Opening Range.
2. **Wait for candle close** — Do NOT enter during the first 15-minute candle. Wait for it to fully close.
3. **Drop to 1-minute chart** — After the 15m candle closes, monitor the 1m chart for breakout confirmation.

Entry Rules

- **LONG:** A 1-minute candle closes FULLY ABOVE the top of the Opening Range → enter long immediately on next candle open
- **SHORT:** A 1-minute candle closes FULLY BELOW the bottom of the Opening Range → enter short immediately on next candle open
- Partial closures or wicks do not count — full candle body must close beyond the range

Stop Loss

- **LONG stop:** Placed at the BOTTOM of the Opening Range (including wick)
- **SHORT stop:** Placed at the TOP of the Opening Range (including wick)
- Stop is placed immediately on entry, never moved against the trade

Take Profit / Exit

- Partial TP: 50–70% position at +6–8% from entry, move stop to breakeven
- Runner: trail stop at +10% to +3–5%, or hold to exhaustion
- Time stop: if no expansion within 4 hours of entry, close at market

ORB Validity

- ORB setup is only valid for **4 hours** after session open
- If no breakout occurs within 4 hours, cancel the setup and wait for next session
- Do not trade an ORB setup that triggers outside the 4-hour window

ORB + Regime Alignment (preferred but not required)

- ORB long in bullish regime = highest confidence → full 4% risk
- ORB short in bearish regime = highest confidence → full 4% risk
- ORB against regime = reduce risk to 2%, scalp only
- ORB in chop regime = allowed at 2% risk, scalp only (ORB is self-contained)

Exit Management (Both Strategies)

- Stop: 3–4% from entry, placed immediately, never widened
- Partial TP: 50–70% at +6–8%, move stop to breakeven
- Runner: trail at +10% to +3–5%, or hold to exhaustion
- Time stop: close at market if no expansion within 24h (Momentum) / 4h (ORB)

Position Sizing

Risk ÷ Stop % × Leverage

⚡ Baller Mode (counter-trend, limited)

- Asset ≥6% deviation from BTC in 24h
- Volume ≥1.5× avg
- Clear exhaustion candle
- Risk ≤2%, scalp only
- All conditions must be met or NO TRADE

Hard Rules

- No averaging down, no revenge trades, no discretionary overrides
- Momentum > prediction. Always.
- **Take trades. Paper trading = learning. No data = no growth.**

- Log every trade: Asset | Direction | Entry | Exit | R multiple | Duration | Regime | Strategy (Momentum or ORB) | Conditions met (X/6 or ORB)

Trade Log Format

```
Asset:
Direction: LONG / SHORT
Strategy: Momentum / ORB
